- Excessive obesity
- Heart and artery diseases

SMART DIET

WHAT IS SMART DIET

Smart Diet is an intelligent application designed to address the challenge of tracking calorie content in Jordanian and Arabic foods. Utilizing image recognition, computer vision, and deep learning technologies, the app identifies dishes through photographs and accurately calculates their caloric values. Users can input personal details such as height, weight, activity level, and gender to determine their daily caloric needs. The application also provides recommendations if the daily calorie limit is exceeded, assisting users in maintaining a balanced diet tailored to their individual requirements.

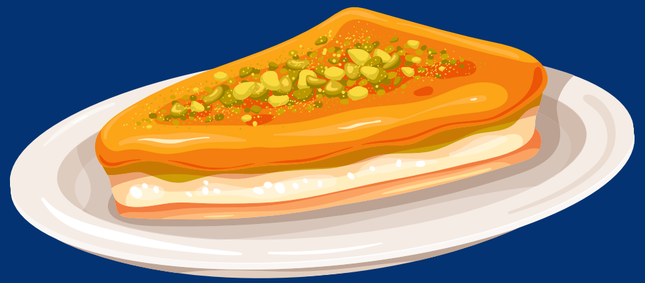
APPLICATION FEATURES

Recognizing Arabic foods

Providing a daily report

Calories count

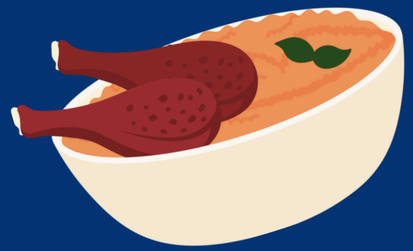


THE TARGET AUDIENCE FOR THE APP

Fans of Arabic cuisine looking for healthy food options and precise calorie tracking

Individuals interested in managing their weight accurately and healthily.

People who want to monitor their daily calorie intake and sustainably improve their eating habits.



HOW TO CALCULATE CALORIES

BMR = 655.1 + (9.563 * WEIGHT) + (1.850 * HEIGHT) – (4.676 * AGE)

Physical activity = (Depends on the person)% * BMR

Thermic Effect of Food (TEF) = 10% * BMR

Note : TEF always 10%

Total Energy Requirement = BMR + Physical Activity + TEF
